

2. Implementation of Bit stuffing mechanism using C.

Aim:

To implement the bit stuffing mechanism using C.

Algorithm:

- Start the program
- Read the input data bits
- Add the flag sequence 01111110

at the beginning and end

- check each bit of the input data
- count consecutive 1s
- After five consecutive 1s, insert a 0 bit
- Display the stuffed data
- Stop the program

Input :

Enter the data bits : 01111110111111

Output :

Stuffed Data : 01111110011111101011111010
111110

Result :

Thus, the bit stuffing mechanism
was successfully implemented using C.
